

Essential System Recovery Tool for Windows® 7/Vista/XP PCs

CPR System Recovery Tool offers fast, simple and powerful system protection and recovery for Windows® 7/Vista/XP PCs. In just minutes, complex problems can be repaired, with little or no technical knowledge required. CPR system recovery tool helps support providers quickly pinpoint the source of problems, resulting in faster problem resolution, reduced support costs and minimized downtime.

Incompatibility.Errors.Corruption

When problems plague a PC, it's hard to figure out how to fix them, or even what's wrong in the first place. And often there's no easy way out. Many common computing activities can cause complex system problems. Unfortunately, problems can occur quite easily and quite often. How?

- ...An application installation/update or driver update modifies key configuration files, resulting in conflicts or non-booting conditions
- ...The Windows Registry is corrupted
- ...System DLLs are corrupted, i.e. when an improper system shutdown occurs
- ...A virus attacks the system, corrupting critical files needed to boot the PC
- ...User-introduced changes create a conflict or the much-feared "Blue Screen of Death"

When these problems plague a system, CPR System Recovery Tool can solve the problem easily and accurately, thus minimizing downtime and reducing the need for lengthy and escalated support calls, on-site visits or return authorizations.

CPR System Recovery Tool

- ♦ **System Protection with or without Windows System Restore service**
- ♦ **Windows-based Recovery**
- ♦ **Non-Booting System Recovery**
- ♦ **No Maintenance: install, schedule snapshot and forget**

Non-Booting Recovery

Avoid the frustrating, time-consuming and undesirable alternative of having to reformat the system and reload the operating system and applications, risking the loss of vital data!

If your system is so troubled that it can no longer boot into Windows, you can restore it to working order **within minutes** using **CPR Preinstallation Environment Recovery**. Just pop in Bart's PE or Microsoft Windows 7/Vista Install Disc, start the system, and in minutes you can restore the system.

Windows-based Recovery

Powerful **Windows-based Recovery** services let you perform Windows or Safe mode restorations. Great for times when the system suffers from conflicts caused by faulty installations, erroneous system changes, Registry corruption, or other related system conflicts.

Low Cost and Low Maintenance System Protection without needing System Restore

CPR proactively safeguards a wide range of system components even when Windows System Restore Service is not enabled or is enabled but not working. CPR is also low cost and low maintenance. Simply install, schedule snapshots, and forget about it until you need CPR recovery service which is available in Windows, Windows Safe Mode, or Preinstallation Environment (if non-booting to Windows). This is the most basic insurance you should have for your Windows PC.

"Portable" System Protection

Carry a complete system recovery tool on a key chain! CPR works seamlessly with Bart's PE on removable USB storage devices, such as a USB memory key, giving you a portable problem-solver. Utilizing any removable USB storage device, CPR allows you to boot the system from the key to perform system recovery.

Ideal support solution for

- ♦ **systems builders,**
- ♦ **resellers,**
- ♦ **solution providers,**
- ♦ **portable USB device vendors,**
- ♦ **and third-party support providers**
