IT Week Proudly Announces The Top 50 Technology Innovators of 2005

December 5th issue of IT Week lists its pick of top 50 companies with the most innovative technology for 2005.

Miami, Fl., December 5, 2005 - IT Week, the only weekly IT magazine to electronically deliver the latest IT news to over 100,000 qualified subscribers each week, is proud to announce it's Top 50 Technology Innovators of 2005.

Technology is what powers global business these days, but innovation is what transforms it and carries it forth. These innovators can be small innovative startups or big corporations, but what is important is what they bring to the global stage. And it's paramount for all involved to keep up to date on new developments.

As such, the December 5th issue of IT Week the magazine, which weekly keeps over a 100,000 subscribers up to date on these developments, will publish its list of the 50 companies it deems have been the most innovative on the technology front in the last year. The list includes big names like Symantec Corporation (<http://www.symantec.com>), as well as newer players like Columbitech (<http://www.columbitech.com>). Awardees span a diverse field of business, so the list features networking companies like NetMotion Wireless (<http://www.netmotionwireless.com>), imaging software companies like Pacific Digital Corporation (<http://www.pacificdigital.com>) and business software companies like Avidian Technologies (<http://www.avidian.com>), to name but a few. Innovation, after all, is everywhere.

Ken Durham, editor of IT Week magazine, explained that the list had evolved from the magazine's observations about the new technologies it featured during the last year and that although it was a hard pick, he was very proud to be able to showcase the great work these 50 companies have done in the magazine.

Terry Logan, Group Publisher & President of Possibility Media which publishes IT Week, added that he was very excited about the magazine's compilation and couldn't wait to see what this year's innovators have in store for us in 2006.

Imagine LAN, Inc. (<http://www.imaginelan.com>), for example, was selected for the Top 50 Technology Innovators of 2005 list for its patent pending portable e-mail technology, which is currently included in imagine LAN's P.I. Protector Mobility Suite product and is slated for use in mobile phone applications in the coming year.

P.I. Protector Mobility Suite ports user's Outlook and Outlook Express email, contacts, calendar, files, and Internet settings to a flash drive or flash memory-based device for "leave no trace" use on any PC. Additionally, P.I. Protector prohibits "spy ware" programs such as Registry-based key logging software from obtaining sensitive information such as passwords, account information, etc. when using foreign PCs.

Imagine LAN's portable e-mail technology has addressed the growing need to carry e-mail on a portable USB flash drive (or other portable device) for use on multiple PCs (home, office, school, library, hotel, internet café, etc.). "USB flash drive users cite portable e-mail as one of the most desired applications for

the USB flash drive” states Jan Olsen, vice president of marketing and sales for imagine LAN, “and P.I. Protector was both the first product to offer this capability and the only portable e-mail solution in its category to offer support for both Outlook and Outlook Express e-mail”.
