P.I. Protector for USB Flash Drives Offers Decorative Skin Selection

imagine LAN offers an add-on skin selection tool for P.I. Protector Mobility software for USB Flash Drives

(Nashua, NH, February 15, 2005) — imagine LAN, Inc., a leading provider of software applications for flash drives to vendors, corporate customers and individual users, is now offering a decorative skin selection tool that can be added-on to P.I. Protector Mobility Suite software for USB Flash Drives, iPods®, flash MP3 players, micro drives, and other portable storage devices.

The P.I. Protector skin selection tool allows users to modify the user interface with a selection of designs included with the tool. Designs range from serene and calm to vivid and bright – there is even a design that celebrates the Chinese Year of the Rooster - 2005:

“Year of the Rooster” Optional Skin

Additionally, users can create their own skin designs by simply creating a bitmap in the appropriate size and storing it in the “Skins” folder within the P.I. Protector installation on the flash drive. Using the selection tool, users can change skins on the fly.

“I’ve been using P.I. Protector for several months, mainly for private Internet browsing and email” explains Matthew Clark, a twenty-two year old college student from Florida’s gulf coast, “The skin tool is a cool feature, I think more applications should offer it”.

“The ability to customize and personalize the P.I. Protector interface really adds to the concept of using the flash drive to carry your personal computing environment with you”, states Jan Olsen, vice president of marketing and sales for imagine LAN, “the USB flash drives themselves come in a variety of styles and colors - it only follows that the software for these devices should be equally colorful and stylish.”

P.I. Protector Mobility Suite software enables users to create a portable PC environment - one in which a generic USB flash drive loaded with imagine LAN’s mobility software can turn any PC into their own “virtual system.” With this method, a user can plug their flash drive into any Windows PC and operate the host PC as if it were their own, by accessing their entire personal computing environment - files, Outlook® and Outlook Express email, Internet, and other settings from the flash drive, with full security and protection of their personal information. All data throughout the entire session that would normally be stored on the hard drive (such as email messages, files, cookies, passwords, URLs, etc.) is redirected to the USB flash drive, which prevents any information from reaching the hard drive of the system being

used. Additionally, file synchronization enables users to update files between the flash drive and their PCs, and P.I. Protector does not require installation or additional set up on the host computer.

Availability, Pricing and Requirements

P.I. Protector Skin Selection Tool will be available on February 20, 2005 and requires P.I. Protector Mobility Suite version 4 or higher. P.I. Protector Mobility Suite costs \$30 dollars (U.S.) per device license (for software download) or \$40 for the program on CD. P.I. Protector Skin Selection Tool costs \$10 (software download) Software can be purchased online at www.imaginelan.com or by calling the company at (800) 372-9776. Contact Jan Olsen at (603) 889-5889 to arrange for a briefing or to obtain evaluation software.
