imagine LAN, Inc. Announces Three Applications for U3 Smart Drive Computing Platform

Portable Outlook®/Outlook Express, File Synchronization, and PC Backup Applications Unveiled at U3 Global Developer Summit

(U3 Global Developer Summit, San Jose, Calif., June 7, 2005) — imagine LAN, Inc., a leading provider of mobility, system health and security solutions for mobile professionals and “on the go” users of USB flash drives, today announced three portable software applications for U3™ powered USB smart drives. P.I. Protector™ provides users with portable Outlook® and Outlook Express email as well as private Internet Explorer browsing with portable IE settings. Sync-Along™ provides users with bi-directional file synchronization with an optional “plug ‘n sync” feature. ConfigSafe® Complete Backup protects multiple PCs with both system and data backup and restore capabilities. These three portable applications will be demonstrated at the U3 Global Developer Summit today, and will begin shipping this fall. U3 powered USB smart drives enable consumers to carry their personal workspace - applications, data and personal computer settings for use on multiple PCs.

Internet browsing and email have become essential lifestyle activities to consumers. A growing list of public places – the local library, the airport, even corner coffee houses in tiny suburbs now offer customers the ability to go online. As consumers increasingly rely on the Web to communicate and receive information, the demand to conduct these activities from multiple access points similarly increases. P.I. Protector installed on a U3 powered USB smart drive satisfies this demand by providing portable email and Internet browsing from a private and secure workspace that simply plugs into any PC. There is also a growing trend for households to have more than one PC and day extenders to use an office PC and a home PC or laptop. For these users, Sync-Along and ConfigSafe Complete Backup coupled with a U3 powered USB smart drive provide the convenience of file synchronization and the protection of system and data backup - for multiple PCs.

“We are pleased to be able to offer our portable software applications on U3 powered USB smart drives,” said Duen-Ping Tsay, founder and president, imagine LAN, Inc., “We appreciate the highly secure environment that the U3 smart drive computing platform provides for storing sensitive data (such as email and Web favorites), which is vital for imagine LAN’s portable software solutions.”

“imagine LAN has been a pioneer in the development of portable applications for USB flash drives,” said Gideon Shaanan, chief technology officer at U3. “We are excited that they have chosen to develop U3 smart versions of P.I. Protector and Sync-Along for the U3 platform, as well as offer their award-winning ConfigSafe technology for U3 powered USB smart drives.”

About imagine LAN, Inc.

Founded in 1992 and privately held, imagine LAN, Inc. develops USB “FlashWare” - mobility, system health and security applications designed to take advantage of the compact, portable nature of the USB flash drive and other portable storage devices. Designed for Microsoft® Windows® users with multiple PCs and people with “on-the-go” lifestyles, imagine LAN provides innovative solutions that help flash drive users work more efficiently, productively, and with greater privacy and security.
