Imagine LAN Announces UltraSync™ v2.0 for Windows® Vista and XP PCs

UltraSync™ software from imagine LAN provides comprehensive digital content synchronization (files, music, pictures, video, Outlook® email, and browser favorites) for Vista and XP PCs

Nashua, NH (PRWEB) January 4, 2007 -- imagine LAN, Inc., a leading developer of mobility and recovery software applications, today announced UltraSync version 2.0. UltraSync, the PC-to-PC synchronization application for files, music, pictures, video, Outlook® email, and browser favorites, has added support for Vista and Outlook 2007 in version 2.0.

UltraSync combines several categories of synchronization into a single easy-to-use application, resulting in effortless synchronization. UltraSync syncs over your wireless home or office network so you don't need any special cables to connect your two PCs, and UltraSync's unique AutoSync feature knows when your PCs are in range and can automatically start a sync when it detects a connection between the two systems.

UltraSync v2.0 Features

- File/Folder sync
- Outlook 2003 and Outlook 2007 folder sync (messages, contacts, calendar, tasks, etc.)
- Browser favorites sync
- Sync Selection Wizard
- Deletion Tracking (files and Outlook)
- Overwritten/Deleted file recovery
- AutoSync (automatically start sync process when two partnered PCs are connected via wireless or wired LAN)
- Skin Selector (decorative skin selection for the UltraSync "dashboard" UI)

Availability and Requirements

UltraSync v2.0 is supported on Windows Vista and Windows XP/SP2 systems (UMPC, notebook, tablet, desktop) with a minimum of 35MB of available space. Retail versions of UltraSync v2.0 will be available from imagine LAN in mid January 2007. An OEM version of UltraSync v2.0 is available now. An upgrade to UltraSync version 2.0 will be available for version 1.0 customers (including Sony UX preload customers) on the imagine LAN website in late January. Contact Jan Olsen at (603) 889-5889 to arrange for a briefing or to obtain evaluation software.

About imagine LAN, Inc.

Founded in 1992, imagine LAN, Inc. develops mobility, system health and security applications designed to take advantage of the compact, portable nature of the USB flash drive and other portable systems and devices.
