Synchronize All Computers at Home or Away with UltraSync Portable™

UltraSync Portable provides users with easy-to-use tools for synchronizing and mobilizing digital media, outlook e-mail and personal files through USB flash drives and network connected drives

Nashua, NH September 11, 2009 -- imagine LAN, Inc., a leading developer of mobility and recovery software applications, today announced the availability of UltraSync Portable which has been specifically designed to meet the synchronization needs of today's consumers.

UltraSync Portable enables users to synchronize their personal files, digital media content, and Outlook e-mail from their Windows XP, Windows Vista or Windows 7 PC to a USB flash drive or other portable memory device (microdrive, iPod®, MP3 player, etc.). From there, users are free to take advantage of this easily accessible tool for whatever purpose they desire, whether it's for creating a backup of critical files, transferring documents from one computer to another or even taking Outlook e-mail and browser favorites on the go.

UltraSync Portable simplifies the process of transferring important digital content from a PC to a USB flash drive. It allows users to create a content profile for each of their PCs so they can easily synchronize selected files, documents, pictures, music, videos, browser favorites and Outlook e-mail with a flash drive. After users have taken their sync'ed data for use when traveling or on borrowed PCs, they can return their USB flash drive to the source PC where UltraSync Portable will sync any changes that have been made on either side since the last synchronization.

The focal points that are the driving force behind UltraSync Portable consist of a user-friendly

design that is easily accessible to users of all levels of experience and robust mobile features that competing products don't offer. UltraSync Portable allows users to synchronize computers at home or away.

UltraSync Portable takes care of computers at home by offering the ability to create “partnerships” between multiple PCs. This feature allows users to keep specific files and folders on multiple PCs synchronized. The complicated process of synchronizing data between multiple PCs which have different operating systems and configurations is simplified for the user. UltraSync Portable also supports two-way file synchronization between a PC and a network connected drive allowing users to easily take advantage of their NAS or servers in both the home and business environment.

UltraSync Portable takes care of the digital content away from home too. It doesn't just sync, it also allows users to access their personal Outlook and Internet Explorer Favorites on a guest PC as if it were their own. UltraSync Portable can temporarily inject Outlook profiles into an Outlook session launched from UltraSync Portable's dashboard. When the session is over, no traces of the user's Outlook activities are left behind on the guest PC. Launching an internet browser from UltraSync Portable also temporarily injects synced internet favorites for use on a guest PC.

UltraSync Portable also allows users to personalize the appearance of the software through the use of user interface skins. Users will be able to choose from a large selection of pre-made skins or even create their own.

For more information or to try out a trial version of UltraSync Portable, visit the imagine LAN website at http://www.imaginelan.com/ultrasync_portable/ultrasyncportable.html.
