

## P.I. Protector™ Mobility Suite v4.0

Your Personal Information Should Be:  
**Portable. Private. Protected. Productive.**

With P.I. Protector Mobility Suite loaded on a USB flash drive or other portable storage device (iPod®, portable media center device, mini hard drive, etc.) you can carry a powerful, secure and compact solution that offers portable email, file synchronization, private Internet browsing, and a portable Internet capability that lets you transfer Internet settings between multiple PCs.

P.I. Protector Mobility Suite is ideal if you use more than one computer, and if you often need to manage and update information between them.

### Device-Centric Software

P.I. Protector Mobility Suite is “**device-centric**” software, which means that the software **is not installed on your PC**. Instead, P.I. Protector installs itself to your USB flash drive or any other portable storage device and runs directly from the device! When you unplug your flash drive and plug it into another PC, P.I. Protector is running and ready to perform. It also means that your private information never has to be stored on the hard drive of any system you use. Never before has mobility been so convenient, so easy or so secure!

### Privacy Protection Guaranteed

Powerful **Leave No Trace™** technologies ensure that your privacy is completely protected when using public systems, because all of your private data (email, Internet browsing activities, files, etc.) is re-routed to the flash drive. Additionally, P.I. Protector prohibits “spy ware” programs such as Registry-based key logging software from obtaining sensitive information such as passwords, account information, etc.

### Essential Applications for USB Flash Drives

- ♦ **Mobile Email**
- ♦ **File Synchronization**
- ♦ **Private Internet Browsing**

### Auto Pop Makes It Simple

P.I. Protector Mobility Suite is simple to use, and it only takes a few clicks to activate its features. Just enable the Auto Pop feature while the flash drive is connected to any desktop, notebook or Tablet PC's USB port. Each time you connect to an enabled system, the menu starts right up to let you select the components you want to use.

### P.I. Protector Applications

- “Portable” mail—send, receive & manage email from any PC
- Seamlessly manage & update information on multiple PCs—desktop, notebook & Tablet
- Go “on the road” without your notebook
- Use guest systems without leaving traces behind
- Surf the Internet privately
- Easily transport work between home & office PCs

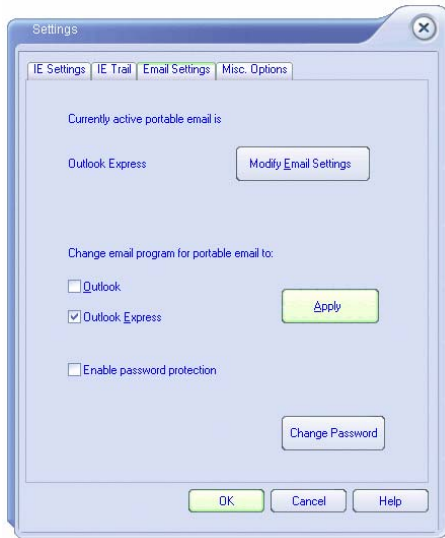

**P.I. Protector Mobility Suite helps keep your online life private, even when you live it on public computers.”**

--- *PC Magazine*

**“P.I. Protector Mobility Suite gives Web users an added dose of privacy and convenience.”** --- *ZDNET*

**“The P.I. Protector tool adds considerable value...to an otherwise normal device.”** --- *Envy News*

## P.I. Protector Mobility Suite Features

### Mobile Email

Looking for a truly portable solution that lets you “carry” your email so you can send, receive and manage it from any system? To get started, a few mouse clicks will port your Outlook or Outlook Express configuration, address book and email messages to your USB flash drive or portable storage device. Wherever you go, just plug in the flash drive to any desktop, notebook or Tablet PC. With a click of the mouse, you can send and receive mail. No hassles and no proprietary applications to learn because P.I. Protector Mobility Suite works with standard email programs like Outlook and Outlook Express. P.I. Protector’s Mobile Email feature solves the problem of having your email messages spread out over multiple PCs or left on the server, forcing you to perform redundant message downloads and deletions on your primary PC. Plus, email management capabilities let you back up your email messages and address book to any system for archival purposes.

### File Synchronization

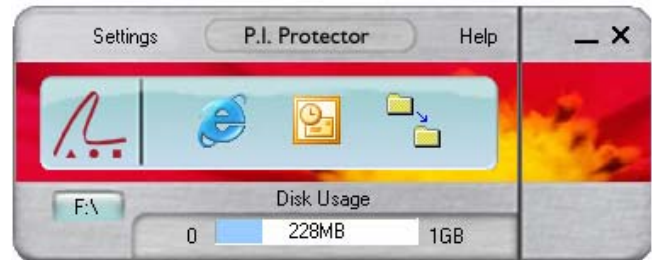

Keep data synchronized between your desktop, notebook or Tablet PC with P.I. Protector's File Synchronization capabilities. Build a profile of documents, folders and/or files to keep synchronized, and when you're ready, just plug in your USB flash drive and synch up! Flexible options let you perform one-way synchronization from your flash drive to the PC or vice versa, or two-way synchronization to ensure both the flash drive and your PC have the latest files.

### Private Internet Browsing

Protect your personal data when using the Internet. When you surf the Web, your computer stores information about what you've been doing, such as...

- Pictures you viewed are copied to your PC
- Sites you visited are recorded in a secret file
- 'Cookies' are left on your computer
- Temporary Internet files eat up precious drive space
- Passwords

Anyone with access to your PC can view this information. With **Private Browsing**, maintain your privacy by diverting Internet activities to a USB flash drive, thereby leaving no trace of your activities on the hard drive.

CHANGE THE LOOK OF YOUR P.I. PROTECTOR INTERFACE WITH THE ADD-ON SKIN SELECTOR UTILITY.

### Internet Portability

Transfer Internet settings (favorites, passwords, cookies, etc.) from one PC to another for a truly portable Internet experience. For example, if your work-related research project must be carried over to your home PC, you no longer need to record every URL you visited...just unplug and go! Favorites, bookmarks, history, temporary files, etc. are transferred to your home PC. It's a great migration tool for copying your favorites and passwords to new PCs or other systems that you use frequently—and so much easier than performing a manual Import/Export process between PCs.
